Vimali - E-commerce Site for Organic Store

Internship: WSPL Hosting Solutions

Objective

Vimali is an e-commerce platform designed for selling organic products for a client who runs an organic store. The primary goal is to provide a seamless online shopping experience for organic food products.

Technologies Used

- **Frontend:** HTML, CSS
- **Backend:** PHP (Laravel Framework)

My Role

As part of my internship at WSPL Hosting Solutions, I was responsible for various tasks in the development and maintenance of the Vimali e-commerce site. My responsibilities included:

- Managing products and making necessary changes on the frontend.
- Implementing product display order as specified in the admin panel.
- Adding products, categories, price units, and stock information from the backend.

Key Features

- **Admin Panel:** Administrators can manage products, handle mail queries, categorize items, and view reports.
- **POS System:** The site includes a Point of Sale (POS) system for managing in-store sales.
- **Documentation Process:** Comprehensive documentation for various processes is included.
- **Payment Gateway:** Secure and efficient payment processing for online transactions.

Challenges Faced

- **Sorting the Display Order:** The challenge was to sort the product display order. This was overcome by providing an extra column for display order and sorting products accordingly.
